Full stack web developer with a passion for improving the world through code. With experience in Laravel, Ruby on Rails, JavaScript, and React and a background in Applications Programming, I discovered coding through an interest in creating software to help people find resources related to their pursuits and to connect with like-minded people.

EMPLOYMENT HISTORY

Lightning Step Technologies, Houston, TX

Software Developer, *March 2020 - Present*

- + Processed tickets by utilizing Jira ticketing system to solve bugs and implement code change requests
- + Engaged and cooperated with developers to discuss solutions to improve code
- + Traversed the stack to find cause of bugs caught by tests
- + Built and maintained automated tests to ensure greater test coverage and tests incorporated new changes

EDUCATION

Flatiron School - Houston, TX - 2019

- + Full Stack Web Development, Ruby on Rails and JavaScript program

San Jacinto Community College - Houston, TX - 2019

- + Associate of Applied Science in Applications Programming

TECHNICAL SKILLS

PHP/Laravel, PHPUnit, JavaScript, JQuery, SQL, Ruby on Rails, React, Redux, HTML/CSS

TECHNICAL PROJECTS

Movementt - [Github](#)

Social media app for dancers

- + Created React components to display user's dance video posts on feed page
- + Developed a Rails API backend with endpoints for posts, users, and tags
- + Utilized nodeJS to scrape dance content from Instagram to display in app
- + Styled frontend with Bootstrap to enhance user interface by making it more responsive

LocalFood Pal - [Github](#)

Find farmers markets nearby and write reviews for them

- + Created React components to display nearby markets when a user enters a zip code
- + Developed a Rails API backend with endpoints for markets, users, and reviews
- + Utilized National Farmers Markets Directory API to pull data on nearby markets and detail data for specific markets
- + Incorporated session authentication to enable browser to keep track of who is logged in even after a page refresh

ULink - [Github](#)

Create thread topics and post links in threads, users can like links and number of likes are displayed

- + Developed a Rails API backend with endpoints for posts, topics, and users
- + Created ERB views to display different user-created threads
- + Utilized Active Storage gem to add image upload functionality
- + Created like button that increments when user clicks

Build-Your-Cookbook - [Github](#)

CLI Ruby project where user can record groups of recipes in collections of cookbooks

- + Created a CLI application with CRUD functionality that allows users to interact with database
- + Used Active Record to maintain data persistence with an SQLite database
- + Utilizes Active Record relationships to group and access related data
